

**VGIS
HANDBOOK**

**PART 2 - STANDARDS
SECTION E**

**GEOGRAPHIC AREA
CODES**

Vermont Geographic Information System

Standard History

- 1993 - Original Standard endorsed by VCGI Technical Advisory Committee.
- June 2000 - Minor update. Sherburne renamed to Killington, which resulted in a change to the towns FIPS6 code. Also changed references to Franklin/Grand Ilse RPC (FG) to Northwest RPC (NW).
- December 2003 - Standard revised to reflect changes in CDP and village designations. Changes based on the following sources:
 - 2000 U.S. Census CDP and Village designations
 - VT State Archives - Secretary of State's Office. Legislative acts which have merged towns/villages.
- July 2004 - Standard revised to reflect allocation of Upper Valley-Lake Sunapee Commission (UV) towns to Two Rivers (TR). Also added three missing villages (Groton, S. Ryegate, Townshend) and moved Northfield Village from "historical" to active (the removal of Northfield in the 2003 update was an error).
- July 2006 - Standard revised to change 'Alburg' to 'Alburgh' based on adoption by the Vermont Board of Libraries in April 2006.

Acknowledgments

VCGI would like to thank the people who assisted in developing and reviewing this standard.

- Original Standard (1993): Thanks to Sara Moulton, Jed Guertin, Eric Edelstein, Cathelene Gent, Sharon Murray, Alice Doyle and David Healy for providing suggestions for their improvement. Special thanks to Steve Bower for preparing the materials for this standard.
- December 2003 Revisions: Thanks to Steve Sharp (VCGI) as well as members of VCGI's Technical Advisory Committee.
- July 2004 Revisions: Thanks to Steve Sharp (VCGI).
- July 2006 Revisions: Thanks to Steve Sharp (VCGI).

Statutory Authority

Vermont Statutes: Title 10: Conservation & Development – Chapter 8: Geographic Information – 10 V.S.A. § 123. Powers and duties

GEOGRAPHIC AREA CODES

I. PURPOSE

This document describes and provides standard codes for Vermont's various geographic areas, including towns, villages, cities, counties, census blocks and others. Any tables of data compiled by these geographic areas should use the codes listed here for GIS compatibility.

A primary use of these standard codes is to store and retrieve socioeconomic data. One function of GIS is to produce thematic maps (maps in which towns or other areas are shaded in based on the values for the different areas). An example would be a thematic map of population density for Vermont's towns. Thematic maps will be easier to produce from various data sources if users adhere to these standard codes.

Standard codes and computer field names and formats are described for the following geographic areas:

- counties
- cities and towns (census minor civil divisions)
- villages (census places)
- census tracts, block groups and blocks
- regional planning commissions

II. FIPS AND CENSUS CODES

Whenever possible, Federal Information Processing Standard (FIPS) codes and census codes set by the federal government will be used. A primary use for these codes will be to link geographic areas with the census data. The FIPS and census codes described below are detailed in *Census of Population and Housing, 1990; Public Law (P.L.) 94-171 Data Technical Documentation* (prepared by the Bureau of the Census, 301-763-2074). *Note: The categories described below did not change in the 2000 census, however, certain town/village code values did (eg: Sherburne -> Killington).*

The Bureau of the Census divides up the country with this hierarchy:

- United States
- Region
- Division
- State
- County
- County Subdivision {generally towns and cities in VT}
- Census Place (or part) {e.g., villages or cities in VT}
- Census Tract or Block Numbering Area (or part)
- Block Group (or part)

Block

The divisions listed above in **bold** are described in this document.

Some FIPS codes are used by the census for certain geographic areas. However, in some cases a *census code* is used rather than a FIPS code to meet the needs of the census. The following table lists standard fields (i.e., attributes) developed by the census bureau to be used in Vermont for the census divisions listed above.

<u>Approximate Geographic division</u>	<u>Description</u>	<u>Field name</u>	<u>Width/type¹</u>	<u>Example</u>
State	FIPS State	STATEFP	2 I	50=Vermont
County	FIPS County	CNTY	3 I	001=County
Town/city	Census MCD ²	COUSUBCE	3 I	015=Bristol Town
Village/city	Census Place	PLACECE	4 I	0400 = Bristol Village
Census Tract		TRACTBNA	6 N	6489
Census block group		BLCKGR	1 I	3
Census block		BLCK	4 C ³	301

For a given Vermont town, city or village, the above fields must be joined together to form a unique code within the state. For convenience and compatibility with common usage, the standard fields below are defined for holding unique codes:

<u>Approximate Geographic division</u>	<u>Description</u>	<u>Field name</u>	<u>Width/type</u>	<u>Example</u>
Town/city	CNTY + COUSUBCE	FIPS6	6 I	001015 = Bristol town
Village/city	FIPS6 + PLACECE4	FIPS10	10 I	0010150000 = Bristol town 0010150400 = Bristol village

The "approximate geographic divisions" of town, village and city are those defined by the Bureau of the Census, and are not necessarily incorporated areas. Census places (PLACECE) includes both incorporated villages, cities and Census Designated Places (CDPs). The CDPs are identifiable by name, but are not legally incorporated places. The non-incorporated village of Middlebury is an example of a CDP.

1 Field types I = Integer, N = Numeric, C = character; integer types are used (instead of the census "alpha/numeric") where possible.

2 MCD = Minor Civil Division; in Vermont, generally a city or town.

3 It may be that BLCK can be an integer (I) field; if there are no alphabetic suffixes to the 3-digit codes, users may prefer a integer field type.

4 The Census Bureau does not recognize some incorporated Villages in Vermont. As a result, the following Villages have been assigned a PLACECE = 999 (Groton, S. Ryegate, Townshend).

Note that incorporated cities have both a unique 6-digit FIPS6 code and a PLACECE code. For example, Burlington has a unique FIPS6 code of 007 015, and a unique FIPS10 code of 0070150460.

III. HISTORIC FIELD NAMES

Some census codes are called FIPS codes in common usage, although they are not actually FIPS codes. For example, the 6-digit field commonly used for Vermont towns, FIPS6, is made up of a 3-digit *FIPS* code for the county and a 3-digit *Census MCD* code for the town within the county. (A federal FIPS Place field, PLACEFP, exists with a unique 5-digit code for each census place in Vermont, but it is not in common usage for GIS data in Vermont, and is not further described here.)

Census data have been distributed in Vermont with field names other than the standard names listed above. These historic names are non-standard and are not recommended for use, but they are listed in the table below as an aid in understanding the available census data.

<u>Standard field name</u>	<u>Historic name</u>
CNTY	FIPSCNTY
COUSUBCE	FIPSMCD (note: this is <i>not</i> a FIPS code)
PLACECE	FIPSPLAC (note: this is <i>not</i> a FIPS code)

IV. CENSUS TRACTS, BLOCK NUMBERING AREAS, BLOCK GROUPS AND BLOCKS

Census tracts are statistical subdivisions of a county delineated by local census committees. Block numbering areas (BNAs) are subdivisions of a county for grouping and numbering blocks where local census committees have not established tracts. Tracts and BNAs are identified by a 4-digit basic number and may have a two-digit suffix separated by a period (the period is implied in digital data, and the suffix may be blank). Tract numbers range from 0001 through 9499.99, while BNAs range from 9501 through 9989.99. Both tracts and BNAs are coded in the field TRACTBNA (6 digits). The TRACTBNA code is unique within each county.

A census block group (field BLCKGR) is a cluster of blocks having the same first digit of the blocks' identifying numbers within their tract or BNA. For example, block group 3 includes all blocks numbered between 301 and 397. Block groups are only unique within each census place (PLACECE). Block groups generally contain between 250 and 550 housing units.

Census blocks (field BLCK) are small divisions for census data collection, numbered uniquely within each census tract or BNA. A block is identified by a 3-digit number, sometimes appended by a

single alphabetical suffix. Census block codes are only unique within each census place (PLACECE).

V. TOWN PATH CODES

Each Vermont town has a *path code*, an abbreviated form of the community name using at most 8 upper-case characters. This is provided mainly as an aid to data managers (such as the GIS Regional Service Centers) for organizing information systematically by town. The path code can be used as a computer path name to the data. The path codes are included in the listing of community codes in section VIII below. Path codes should be stored in 8-character field PATHCODE.

VI. LISTING OF COUNTY CODES

County FIPS codes (3-digit integer field CNTY):

1	Addison	15	Lamoille
3	Bennington	17	Orange
5	Caledonia	19	Orleans
7	Chittenden	21	Rutland
9	Essex	23	Washington
11	Franklin	25	Windham
13	Grand Isle	27	Windsor

VII. REGIONAL PLANNING COMMISSION CODES

Regional Planning Commissions (RPCs) were established by the Vermont state legislature. RPCs are coded with two upper-case characters, in the 2-character field RPC:

AC	Addison County RPC	NV	Northeastern VT Development Assc.
BC	Bennington County RC	RR	Rutland RPC
CC	Chittenden County RPC	SW	Southern Windsor County RPDC
CV	Central Vermont RPC	TR	Two Rivers-Ottawquechee RC
NW	Northwest RPC	WR	Windham Regional Commission
LC	Lamoille County PC		

* *UV - Upper Valley-Lake Sunapee Council no longer services towns in Vermont (as of 7/1/2004).*

VIII. LISTING OF COMMUNITY CODES

Listings of Vermont town, village and city codes are given on the following pages in two formats:

- in numerical order by FIPS6 code, and
- alphabetically by community.
